RE: Software Developer - Data Products and Services, Squarepoint

Dear Hiring Team,

I am writing to apply for the Software Developer - Data Products and Services role at Squarepoint. The role is a strong match for my background building data-driven products, backend services, React applications, reusable frameworks, and production-grade platforms for technical stakeholders. I am especially interested in the team's focus on working closely with investment teams while using modern cloud, data, and machine learning tooling to improve business outcomes.

At RBC, I led the 0-to-1 delivery of a patent-pending enterprise blueprint platform using Node.js, TypeScript, React, REST APIs, real-time data rendering, rules-based recommendations, auto-certification workflows, and secure service matching. The platform is used by architecture, infrastructure, security, product, and risk stakeholders to understand requirements, compare implementation options, and generate technical artifacts. That experience maps directly to building data products where stakeholder discovery, documentation, iteration, and long-term product ownership matter.

I also architected an institution-wide telemetry platform using OpenTelemetry, Vector, Fluent Bit, Kafka, and Logstash, ingesting 150 TB/day across 10,000+ systems. That work required resilient backend design, data transformations, schema contracts, validation, monitoring, alerting, replayable ingestion, and production support. I built shared abstractions and onboarding patterns adopted by 20+ teams, improving maintainability and throughput for both data producers and consumers.

Earlier, as the first engineer at HealthCard, I built an end-to-end product from scratch: React/TypeScript frontend, Node.js/Express APIs, AWS EKS deployment, audit logging, verification workflows, and trust-score data models for insurance validation. I also integrated document classification and monitoring pipelines, reducing manual review by 60%. Across these roles, I have consistently owned products beyond initial delivery by improving reliability, documentation, observability, and developer experience.

I would welcome the opportunity to bring my experience in Python, React, backend services, relational and document-oriented data stores, cloud deployment, distributed systems, and production ownership to Squarepoint's Data Products and Services team. Thank you for your consideration, and I would be glad to discuss how my background can support tools and services used by investment teams.

Best regards,
Dhruv Doshi
