RE: Software Developer - Risk Data Pipelines, Squarepoint

Dear Hiring Team,

I am writing to apply for the Software Developer - Risk Data Pipelines role at Squarepoint. The role strongly matches my background building high-scale data pipelines, production monitoring systems, financial workflow automation, and stakeholder-driven platform services. I am especially interested in Risk Technology's work around trade data ingress and egress, position and P&L monitoring, reconciliation, regulatory feeds, and business-critical support for systematic trading strategies.

At RBC, I architected an institution-wide telemetry platform using OpenTelemetry, Vector, Fluent Bit, Kafka, and Logstash, ingesting 150 TB/day across 10,000+ systems. That work required the same engineering fundamentals behind resilient risk data pipelines: schema normalization, routing, validation, replayable ingestion, alerting, SLOs, anomaly detection, and downstream analytics. I also built production controls around data readiness, traceability, runbooks, escalation paths, and level-2 support workflows for regulated systems.

I also have direct experience designing workflow automation and correctness checks in financial-adjacent systems. At HealthCard, I was the first engineer and built React/TypeScript frontend services, Node.js/Express APIs, AWS EKS deployment, audit logging, verification workflows, and trust-score data models for real-time premium validation and claims processing. I designed reconciliation and validation logic with monitoring and feedback loops, reducing manual review by 60% while improving correctness of credential verification.

Across these roles, I have worked closely with technical and business stakeholders to capture requirements, define architecture, identify bottlenecks, deliver functionality, and continue improving systems after launch. I have led five engineers through design discussions, code reviews, testing expectations, documentation, and reusable platform standards. I also bring project experience in trade-like feed normalization, position/P&L reconciliation, real-time market data processing, and portfolio risk analytics.

I would welcome the opportunity to bring my Python, SQL, data engineering, monitoring, production support, and financial systems experience to Squarepoint's Risk Data Pipelines team. Thank you for your consideration, and I would be glad to discuss how my background can support reliable trade data flows, risk analytics, and automated operations.

Best regards,
Dhruv Doshi
