RE: Enterprise Architect, Toronto ON (Hybrid)

Dear Hiring Team,

I am writing to express my interest in the Enterprise Architect opportunity in Toronto. My current role at RBC combines enterprise architecture, hands-on software delivery, platform governance, API-first design, identity and security patterns, cloud architecture, and stakeholder leadership across engineering, data, infrastructure, product, risk, and security teams. This aligns closely with the role's need for an architect who can set strategy while remaining technically hands-on.

At RBC, I operate within the Enterprise Architecture group and define target-state architectures, standards, governance patterns, and certification practices for distributed banking platforms. I designed and led the 0-to-1 delivery of a patent-pending enterprise blueprint platform using Node.js, TypeScript, React, REST APIs, real-time data rendering, rules-based recommendations, auto-certification workflows, and secure enterprise service matching. The platform helps teams translate business requirements into compliant technical solutions and supports architecture reviews at scale.

I bring strong experience across the areas highlighted for this role: digital identity, APIs, application security, data platforms, privacy, governance, and distributed systems. I have governed IAM, SSO, OAuth, gateway, Zero Trust, internal/external integration, and data-handling patterns for regulated enterprise solutions across AWS, GCP, OCP/Kubernetes, and on-prem environments. I also architected an OpenTelemetry-based telemetry platform ingesting 150 TB/day across 10,000+ systems, enabling standardized monitoring, auditability, SLOs, and data-driven operations.

Beyond strategy, I stay close to delivery. I led five engineers through architecture reviews, code reviews, ADRs, sprint delivery, mentoring, executive-ready demos, and cross-functional alignment. Earlier, as the first engineer at HealthCard, I built secure cloud-native systems involving identity verification, audit trails, trust-score workflows, and HIPAA-aligned data handling. This combination of enterprise governance and hands-on engineering is the way I prefer to work.

I would welcome the opportunity to discuss how my background in enterprise architecture, API-first distributed systems, cloud platforms, identity/security, data governance, and stakeholder leadership can support this Toronto hybrid role. Thank you for your consideration.

Best regards,
Dhruv Doshi
