RE: Senior Software Engineer II - Shopper Activation & Engagement, Instacart

Dear Hiring Team,

I am writing to apply for the Senior Software Engineer II role on the Shopper Activation & Engagement team at Instacart. The combination of product-minded full-stack engineering, user activation, instrumentation, and cross-functional collaboration is a strong fit for the work I have been doing and the kind of product engineering I want to keep building. I am especially drawn to improving experiences that help people get started quickly and keep coming back.

At RBC, I led the 0-to-1 delivery of a Node.js, TypeScript, and React platform with reusable workflows and real-time data rendering. That work taught me how to turn ambiguous product goals into shippable features, keep the user experience clean and understandable, and build the service patterns that support ongoing iteration. I also helped build reusable implementation guidance and onboarding material, which maps well to activation and engagement work where clarity and momentum matter.

I also bring hands-on experience from HealthCard, where I was the first engineer and built a cloud-native product from scratch on AWS EKS, including a React frontend, Node.js API, and audit logging. Earlier at Dalhousie, I supported software development and cloud computing courses while doing systems research, which strengthened the low-level reasoning and communication skills that help when working across product, infrastructure, and engineering.

What attracts me to this role is the opportunity to work on experiences that shape user behavior and product adoption. I like combining UI craftsmanship, reliable backend services, testing discipline, and instrumentation so teams can make better product decisions. I also embrace AI-assisted development tools as part of my workflow, using them to move faster while still applying judgment and care.

I would welcome the opportunity to bring that mindset to Instacart and help improve the shopper activation journey and the tools that support long-term engagement. Thank you for your consideration, and I would be glad to discuss how my background in React, Node.js, cloud delivery, and product-focused engineering maps to the team's goals.

Best regards,

Dhruv Doshi
