RE: Platform Architect - Senior, J & M Group Inc.

Dear Parul / Hiring Team,

I am writing to express my interest in the Platform Architect - Senior opportunity you shared. My background is in enterprise AI architecture, cloud-native systems, Kubernetes-based deployments, observability, and distributed platforms, and I'm excited by the chance to apply that experience to secure, scalable platform work for your client.

In my current role at RBC I led design and delivery of enterprise AI and cloud-native platform work: reference architectures, AI governance, CI/CD for model lifecycle management, and institution-wide observability using OpenTelemetry and Prometheus. These efforts helped standardize delivery and improve operational visibility across teams.

I have strong experience translating business requirements into architecture standards and automation. I've driven CI/CD best practices, defined secure and compliant deployment patterns, and authored runbooks and ADRs to scale governance. I also mentor engineers and lead cross-functional reviews to align security, reliability, and product goals.

I'm confident my combination of Kubernetes, cloud-native delivery, observability, and enterprise architecture experience maps closely to the role's requirements. I'm available for a call or interview and can share an updated resume and references on request.

Best regards,
Dhruv Doshi
