

PLATFORM PROFILE

Enterprise software engineer and architect with experience building Kubernetes-based cloud systems, observability platforms, AI/ML infrastructure, and secure distributed applications in regulated environments.

SKILLS

Cloud & MLOps: AWS Bedrock, SageMaker, GCP Vertex AI, Azure AI, Kubernetes, Docker, CI/CD
Data & Observability: OpenTelemetry, ELK Stack, Prometheus, CloudWatch, distributed tracing
Architecture: software design, microservices, event-driven architecture, IAM, zero-trust, Responsible AI, AI governance
Leadership: technical reviews, cross-team collaboration, workshops, documentation, and mentoring

PROFESSIONAL EXPERIENCE

- Enterprise AI Architect & Lead Developer** Nov 2022 – Present
Royal Bank of Canada (RBC) *Toronto, Canada*
 - Enterprise AI Architecture & Governance:** Designed end-to-end AI solutions across cloud and enterprise systems; established reference architectures, AI guardrails, and governance policies in line with Responsible AI principles.
 - MLOps & Model Lifecycle Management:** Built CI/CD pipelines for AI/ML model deployment, feature stores, observability, and evaluation pipelines for enterprise-scale LLMs and predictive models.
 - Business Impact & Value Realization:** Delivered AI solutions for log ingestion, anomaly detection, and infrastructure automation; translated technical metrics into executive KPIs and business ROI.
 - Cross-functional Leadership & Enablement:** Partnered with IT, Security, Product, and Business teams to integrate AI; conducted workshops to upskill engineers and stakeholders on LLMs, generative AI, and adoption best practices.
- Solution Architect & Blockchain Architect** Mar 2022 – Nov 2022
HealthCard (acquired) *Remote*
 - Decentralized Identity & AI Integration:** Architected a blockchain-based identity verification platform integrating AI for document validation, using Hyperledger Fabric and AWS-native services.
 - Cloud-Native Microservices Strategy:** Migrated a monolithic healthcare platform to AWS EKS microservices, improving scalability, observability, and compliance readiness.
- Research & Teaching Assistant – Cloud & AI** Sept 2021 – Aug 2022
Dalhousie University *Halifax, Canada*
 - Cloud & AI Labs:** Delivered graduate labs on AWS architecture patterns, Kubernetes, MLOps pipelines, and AI experimentation frameworks.
 - Visualization Tools for Learning AI Algorithms:** Developed Python-based visualization tools to trace ML algorithm computations and enhance student comprehension.

SELECTED AI & ARCHITECTURE PROJECTS

- Enterprise AI Log Ingestion Platform:** Designed AI-driven log collection and anomaly detection pipelines; deployed scalable ML services with Python, Kubernetes, and cloud orchestration.
- Portfolio Risk Optimization Framework:** Architected a cloud-based portfolio analytics engine on AWS SageMaker and Lambda; deployed predictive models and APIs for real-time risk-adjusted return forecasts.
- Flight Pricing Optimization Agent:** Built a reinforcement learning agent for dynamic pricing using AWS SageMaker and API Gateway; focused on scalable model deployment and observability.
- DCS-BBN: Blockchain-Based Cloud Storage:** Designed decentralized blockchain storage integrating AWS S3, Hyperledger Fabric, and KMS for secure, scalable cloud storage; published research in Springer's international conference.

EDUCATION

- Dalhousie University** Halifax, Canada
Master of Applied Computer Science; GPA: 3.9/4.0 Jan 2021 – Aug 2022
- Gujarat Technological University** India
B.E. Computer Engineering; GPA: 3.92/4.0 Aug 2016 – Aug 2020
