RE: Python Developer, Alpha Data Team, Squarepoint

Dear Hiring Team,

I am writing to apply for the Python Developer role on Squarepoint's Alpha Data team. The role is a strong match for my background building high-scale data pipelines, reusable platform frameworks, query-friendly data models, and production support practices for technical users. I am especially interested in the team's mandate to deliver valuable datasets quickly while improving quality of life, throughput, and code quality through better abstractions and shared services.

At RBC, I architected an institution-wide telemetry platform using OpenTelemetry, Vector, Fluent Bit, Kafka, and Logstash, ingesting 150 TB/day across 10,000+ systems. That work required resilient ingestion, transformation, routing, schema design, validation, replayable processing, monitoring, alerting, and downstream analytics. I also built shared schema contracts, onboarding guides, and reusable service patterns adopted by 20+ teams, reducing point-to-point integrations and improving maintainability for data producers and consumers.

I work closely with demanding technical stakeholders to turn ambiguous requirements into reliable data and platform workflows. In my current role, I partner with architecture, infrastructure, product, security, and risk teams to model data, define query-friendly structures, write technical specifications, demo iterations, and own systems through deployment and production support. That maps directly to collaborating with researchers to onboard datasets and design models that support efficient alpha generation.

Earlier, as the first engineer at HealthCard, I built a data-driven product from scratch: React/TypeScript frontend, Node.js/Express APIs, AWS EKS deployment, audit logging, verification workflows, and trust-score data models for insurance validation. I also integrated document classification pipelines and monitoring for medical and insurance records, reducing manual review by 60%. Across these roles, I have consistently combined Python-oriented data thinking, SQL, production engineering, cloud deployment, and operational ownership.

I would welcome the opportunity to bring my experience in Python, SQL, Postgres-style data modelling, pipeline reliability, AWS, APIs, CI/CD, monitoring, and production support to Squarepoint's Alpha Data team. Thank you for your consideration, and I would be glad to discuss how my background can help deliver robust datasets and frameworks for quant researchers and traders.

Best regards,

Dhruv Doshi
