RE: Quant Developer (Python), Squarepoint

Dear Hiring Team,

I am writing to apply for the Quant Developer (Python) role at Squarepoint. The position is a strong match for my background building reusable software platforms, high-scale data pipelines, production monitoring systems, and quantitative research tooling. I am especially interested in the opportunity to work directly with quantitative researchers to design workflows that move from research to trading with strong engineering discipline and production ownership.

At RBC, I architected an institution-wide telemetry platform using OpenTelemetry, Vector, Fluent Bit, Kafka, and Logstash, ingesting 150 TB/day across 10,000+ systems. That work required practical design around data storage, processing, schema contracts, time-series analytics, alerting, SLOs, anomaly detection, and level-2 production debugging. It also required the engineering habits Squarepoint emphasizes: clean reusable components, operational handoff, monitoring, runbooks, and close communication with technical stakeholders.

I also led the 0-to-1 delivery of a patent-pending enterprise blueprint platform using Node.js, TypeScript, React, REST APIs, real-time data rendering, and a rules-based recommendation engine. While the product domain is enterprise architecture, the engineering pattern maps closely to quant development: take ambiguous expert requirements, design scalable workflows, build reusable software components, iterate with demanding users, and own the system through deployment and support.

My project work further reflects my interest in quantitative systems. I built a sub-second trading algorithm integrating live brokerage APIs and real-time market data streams with momentum and mean-reversion signals, automated risk management, position sizing, and performance monitoring. I also built a Python portfolio risk optimization framework for market data ingestion, backtesting, Sharpe analysis, Monte Carlo simulation, and reproducible quantitative experiments.

I would welcome the opportunity to bring my Python, data engineering, production systems, CI/CD, logging, monitoring, and technical communication experience to Squarepoint's Quantitative Development team. Thank you for your consideration, and I would be glad to discuss how my background can support reusable research and trading workflows across asset classes.

Best regards,

Dhruv Doshi
