RE: Staff Software Engineer, End User Protection (Auth0)

Dear Hiring Team,

I am writing to apply for the Staff Software Engineer role on the End User Protection team at Auth0. The mix of identity protocols, attack protection, ML collaboration, and high-scale service ownership is a strong fit for my background and the kind of engineering I want to keep doing. I am especially interested in work that protects end users without adding friction and that turns noisy login behavior into clear, actionable security signals.

At RBC, I have led the 0-to-1 production delivery of a Node.js, TypeScript, and React platform, while also standardizing OpenTelemetry-based operational signals used by more than 20 engineering teams. That work required me to think carefully about reliability, auditability, and the quality of data flowing through services, which is relevant when systems need to detect abuse patterns and support high-confidence decisions at scale.

I also bring hands-on experience building secure cloud-native software in smaller, fast-moving environments. At HealthCard, I was the first engineer and built the product from scratch on AWS EKS, including a React frontend, Node.js API, and HIPAA-compliant audit logging. Earlier at Dalhousie, I supported software development and advanced cloud computing courses while doing systems research, which sharpened my low-level reasoning and ability to communicate technical tradeoffs clearly.

What attracts me to this role is the combination of security engineering and product impact. I like thinking about how authentication systems fail, how signals should be modeled, and how engineering teams can be helped with practical, incremental changes. I also have hands-on exposure to OAuth, OIDC, SAML, MCP, A2A, and AI-integrated patterns, so I am comfortable working at the intersection of identity and emerging attack surfaces.

I would welcome the chance to help Okta protect end users by building durable detection, secure implementation patterns, and strong engineering collaborations with product and ML teams. Thank you for your consideration, and I would be glad to discuss how my background maps to the team's goals.

Best regards,

Dhruv Doshi
