RE: Staff Product Security Engineer, Reviews - Okta

Dear Hiring Team,

I am writing to apply for the Staff Product Security Engineer, Reviews role at Okta. The combination of security reviews, secure development guidance, and hands-on work on AI-integrated systems is the right fit for my background and the kind of technical depth I want to keep using every day. I am especially interested in work that sits close to engineering teams, where the goal is not just to find issues but to help ship safer products.

At RBC, I have worked on enterprise security and AI governance in a heavily regulated environment, covering Responsible AI, IAM, audit trails, compliance, and sovereign-cloud constraints across AWS, GCP, and OCP. That work required close collaboration with product, risk, and architecture stakeholders, and it sharpened my ability to evaluate designs for security implications, explain tradeoffs clearly, and make remediation practical for the teams implementing the systems.

I also bring strong hands-on experience from building and hardening cloud-native software. At HealthCard, I was the first engineer and built the product from scratch on AWS EKS, including an API layer, audit logging, and a verification system that had to be defensible in a regulated workflow. Earlier, at Dalhousie, I supported software development and advanced cloud computing courses while working on systems research, which strengthened my low-level reasoning and ability to explain technical ideas clearly.

What attracts me to this role is the opportunity to combine secure code review, threat modeling, and automation with real product impact. I like digging into authentication and authorization flows, reasoning about how systems fail, and turning that analysis into concrete guidance or tooling that helps engineers catch problems earlier. I also have hands-on exposure to MCP, A2A, RAG, and other AI-integrated patterns, so I am comfortable thinking about the new security issues that emerge when LLM-driven workflows are part of the product surface.

I would welcome the chance to contribute that mix of engineering depth, communication, and practical security judgment to Okta. Thank you for your consideration, and I would be glad to discuss how my background maps to your product security review work.

Best regards,

Dhruv Doshi
