**RE: Customer Experience Engineer, CXE-T – Docker**

Dear Hiring Manager,

I am applying for Docker's Customer Experience Engineer, CXE-T role. My background combines hands-on platform engineering, applied architecture guidance, cloud-native delivery, and technical enablement in complex enterprise environments. The opportunity to turn deep technical expertise into reusable sessions, reference patterns, and adoption frameworks is closely aligned with how I work: solve a difficult platform problem once, codify the solution, and help engineering teams apply it consistently.

At RBC, I designed and led the 0-to-1 production delivery of an architecture enablement platform that maps more than 1,000 security, integration, infrastructure, and deployment patterns to compliant component selections. The platform gives engineers practical guidance while automating certification workflows in a highly constrained environment. I also work directly with principal architects, product, engineering, and risk stakeholders to translate requirements into designs that teams can implement. That combination of building and advising is well suited to Docker's need for a technical authority who can scale adoption without losing architectural depth.

My strongest example of reusable enablement is RBC's OpenTelemetry standardization. I defined schema contracts, collection patterns, and SDK onboarding guides adopted by more than 20 engineering teams. In parallel, I architected a vendor-neutral logging platform processing 150 TB per day across 10,000+ systems. These initiatives required me to make complex platform behavior understandable, create repeatable implementation paths, and surface recurring engineering friction. As a former teaching assistant for Software Development, Algorithms, and graduate Advanced Cloud Computing, I also bring formal experience explaining technical concepts to audiences with different levels of maturity.

I have built and operated containerized systems directly. As HealthCard's first engineer, I delivered a React and Node.js product on AWS EKS with audit logging and regulated data-handling controls, then implemented CI/CD for its smart-contract components. At RBC, I am also building an LLM and RAG architecture assistant that incorporates Zero-Trust, OAuth, MCP gateway, and agent gateway patterns; I would bring an honest, implementation-oriented perspective to Docker's emerging agent governance work.

I would welcome the opportunity to help Docker customers move from initial adoption to secure, repeatable platform practices through technical sessions, reusable environments, and clear architectural guidance. Thank you for your consideration. I look forward to discussing how my platform engineering, enablement, and governance experience can support Docker's customer community.

Best regards,  
Dhruv Doshi

SKILLS

- **Containers & Platform:** Docker, Kubernetes, AWS EKS, OpenShift (OCP4.x), Helm, Terraform, CI/CD, DevOps, Infrastructure as Code
- **Security & Architecture:** IAM, Zero-Trust, AI Governance, Responsible AI, audit trails, regulatory compliance, architecture patterns, Enterprise Architecture (TOGAF)
- **AI & Agentic Systems:** LLMs, RAG, Agentic Workflows, MCP Gateway, LLM Orchestration, Bedrock, LangChain, Vector Databases
- **Languages & Development:** TypeScript, JavaScript, Python, Go, SQL | React, Node.js, REST APIs, GraphQL
- **Data & Observability:** OpenTelemetry, Kafka, ELK Stack, Prometheus, Distributed Tracing, SLOs, Alerting Pipelines

EXPERIENCE

- **Royal Bank of Canada (RBC)** Toronto, Canada  
*Staff Software Developer & Enterprise Architect* Nov 2022 – Present
  - **Architecture Enablement Platform:** Designed and led 0-to-1 production delivery of a Node.js, TypeScript, and React platform that maps 1,000+ architecture patterns to compliant component selections and automates certification in security-constrained environments.
  - **Reusable Technical Guidance:** Defined OpenTelemetry schemas, collection patterns, and SDK onboarding guides adopted by 20+ engineering teams, turning complex observability requirements into repeatable implementation paths.
  - **Platform & Governance Advisory:** Worked with principal architects, product, engineering, and risk teams to guide solution certification across cloud, networking, gateway, IAM, security, and deployment patterns.
  - **AI Agent Architecture:** Building ASB Assist, an LLM and RAG interface for architecture generation that injects Zero-Trust, MCP gateway, agent gateway, and OAuth patterns into proposed designs; the capability remains under development.
  - **Hands-On Technical Leadership:** Led 5 engineers through weekly sprints, code reviews, ADRs, and platform mentorship while aligning delivery with product, risk, and architecture stakeholders.
- **HealthCard (Acquired Startup)** Remote  
*Blockchain Architect & First Full Stack Engineer* Aug 2021 – Jul 2022
  - **Containerized Product Delivery:** Built the product from scratch across React/TypeScript, Node.js/Express, Hyperledger Fabric, and AWS EKS, with HIPAA-compliant data handling and complete audit logging.
  - **Secure Delivery Pipeline:** Containerized workloads on EKS and implemented Hardhat/Foundry CI/CD for Ethereum contracts, reducing deployment cycles from days to under 30 minutes.
- **Dalhousie University** Halifax, Canada  
*Teaching Assistant & Research Assistant* Jan 2021 – Aug 2022
  - **Technical Instruction:** Supported Software Development, Algorithms, and graduate Advanced Cloud Computing through labs, assignment guidance, and clear explanations of systems concepts.

PROJECTS

- **Logging as a Service:** Architected a vendor-neutral Vector, Fluent Bit, Kafka, and Logstash platform processing 150 TB/day across 10,000+ systems and enabling vendor changes through configuration rather than point-to-point rebuilds.
- **DCS-BBN:** Designed a decentralized storage network using Solidity, Hyperledger Fabric, and zk-SNARK proofs for privacy-preserving verification; published through Springer ICMR.

EDUCATION

- **University of Toronto** Toronto, Canada  
*Enterprise Architecture Certification (3-semester program)* Completed 2024
- **Dalhousie University** Halifax, Canada  
*Master of Applied Computer Science; GPA: 3.9/4.0* Jan 2021 – Aug 2022
- **Gujarat Technological University** India  
*BE Computer Engineering; GPA: 3.92/4.0* Aug 2016 – Aug 2020
