RE: Solutions Architect II (Canada), Ellucian

Dear Hiring Manager,

I am applying for the Solutions Architect II opportunity at Ellucian. In my current role at RBC, I combine enterprise architecture with hands-on platform delivery, translating institutional objectives into solution designs, governance standards, implementation patterns, and measurable operational outcomes. I am based in Toronto and bring Canadian experience across a large regulated enterprise, the federal public sector, and higher-education teaching and research.

At RBC, I designed and led the 0-to-1 production delivery of a patent-pending architecture blueprint platform. The platform maps more than 1,000 architecture patterns to real-time component selections, automates compliant solution blueprints and certification workflows, and has achieved organization-wide adoption. This work requires the same practical bridge between business needs, functional capabilities, technical constraints, product direction, and implementation teams that Ellucian describes for its architecture practice.

I also digitalised RBC's technical reference model, connecting 1,000+ technologies with 1,500+ capabilities and accountable owners. That repository supports standards, roadmap decisions, governance, and modernization planning at scale. In parallel, I architected a telemetry platform processing 150 TB per day across 10,000+ systems and created onboarding guidance adopted by more than 20 engineering teams. These programs strengthened my ability to standardize reusable solutions, facilitate architecture decisions, manage delivery risk, and articulate value through concrete outcomes.

My approach stays close to implementation. I lead five engineers through sprint planning, architecture and code reviews, ADRs, mentoring, and cross-functional alignment with product, risk, security, infrastructure, engineering, and architecture stakeholders. Earlier, as HealthCard's first engineer, I helped take a cloud platform from concept through implementation and supported its growth to a 20+ person engineering team. My time as a teaching and research assistant at Dalhousie also gave me direct experience within a Canadian university environment and a personal connection to technology-enabled learning.

I would bring to Ellucian a strong foundation in capability-driven architecture, cloud modernization, implementation governance, and stakeholder-oriented technical leadership, together with the discipline to learn Ellucian's product landscape and higher-education operating context quickly. I would welcome the opportunity to discuss how that experience could support successful outcomes for Canadian institutions.

Best regards,
Dhruv Doshi
