RE: AI Architect II, Google Solutions Line – Insight

Dear Hiring Manager,

I am applying for the AI Architect II position in Insight's Google Solutions Line. My background combines hands-on AI application engineering, enterprise architecture, cloud delivery and technical leadership. In my current role at RBC, I move between discovery, solution design, implementation, governance and stakeholder alignment, which closely matches the end-to-end ownership Insight expects from this architect.

I am currently building ASB Assist, a conversational AI capability that turns natural-language business requirements into compliant architecture diagrams and enterprise service recommendations. The system uses an LLM and retrieval-augmented generation pipeline while injecting security controls such as OAuth, Zero-Trust, MCP and agent gateways. This work builds on a patent-pending architecture platform that I designed and led from zero to production using Node.js, TypeScript and React. I wrote 99.6% of its production code and all core logic, supporting more than 1,000 architecture patterns in air-gapped, security-constrained environments.

My broader applied-AI experience includes integrating transformer-based document classification into a healthcare platform, with inference APIs, AWS EKS deployment and production monitoring that reduced manual review overhead by 60%. I have also defined an organisation-wide Responsible AI framework spanning model risk, IAM, auditability, OSFI, GDPR and Sovereign AI across AWS, GCP and OCP. These experiences have taught me to pair experimentation with the controls and documentation needed for enterprise adoption.

I lead five engineers through architecture decisions, ADRs, code reviews and weekly delivery while working closely with product, risk and enterprise architecture stakeholders. I also architected an OpenTelemetry and Kafka platform processing 150 TB per day across more than 10,000 systems, then produced schema contracts and onboarding guidance adopted by over 20 engineering teams. That combination of implementation depth, clear technical documentation and cross-functional leadership would help me contribute across Insight engagements from solution design through launch.

Insight's emphasis on customer outcomes, Google Cloud and practical agent-based solutions is compelling. I would welcome the opportunity to discuss how my experience with conversational AI, RAG, cloud architecture and responsible enterprise delivery can support your clients and colleagues.

Best regards,
Dhruv Doshi
